Winter Season Safety

Slippery Walkways:

In cold areas (MN) that get heavy ice and snowfall, icy walkways are potentially a major obstacle and hazard. It is always a priority to keep these areas open and safe for walking by “de-icing”. One of the most prominent de-icers that can be used is sand as it’s an effective means of dealing with frozen walkways. Sand is used as an abrasive material by improving traction over ice. If sidewalks and other entrances on the jobsite become snow packed and slippery, request that the GC uses sand to prevent and slips & trips.

Proper Lighting:

As we move into the winter season, mornings and evenings become darker earlier. It is important we walk our jobsites to ensure lighting is adequate in all traffic areas, including sidewalks, entrance areas, basements and stairways. Poor lighting can lead to injury.
